

TIME ZONES

You will need the time zones by country map and a world map to carry out the following activity.

- a) Choose a country anywhere in the world and imagine that it is midday (12pm) in that location.
- b) Using the time zones by country map and a world map, find countries to fit in the other categories in the table below.
- c) Repeat this exercise choosing a different country for the midday section.
- d) Now try to explain why night and day take place at different times in different places on Earth.

Time	Sunrise (on average around 6am)	Midday (12pm)	Sunset (on average around 7pm)	Midnight (12am)
Country and continent				

Time	Sunrise (on average around 6am)	Midday (12pm)	Sunset (on average around 7pm)	Midnight (12am)
Country and continent				

My explanation as to why night and day take place at different times in different places on Earth:
