

Year 3/4 - Plants

Answer sheet

Learning Objectives:

To name all the parts of a plant.

To explain the job of each part of a plant.

To understand what a plant needs to survive.

Part 1

Guided practice

I will write the first one for you!

Plants have leaves, their job is to help take in the sunshine and turn it into food for the plant.

Independent practice

The roots of the plant anchor it into the ground and hold it secure.

The job of the stem is to transport water and nutrients to the leaves.

Flowers have an important job, this is to attract insects so that pollination can take place.

Part 2

Guided practice

Quiz answers will be given on the webpage

Independent practice - This is just an example of what you could write!

Plants need several things in order to survive. Firstly they need water, this travels up the stem to the leaves carrying nutrients, which are also very important for the plant to survive. Plants also need sunlight. This sunlight is absorbed by the leaves and turned into food for the plant.

All of these things are vital in order for a plant to survive and remain healthy.

Parts of a Plant
